

## ● Example ( Program ) :

### ● Branching

```
#include <stdio.h>

int main() {
    int age = 20;
    if (age >= 18) {
        printf("You are an adult.\n");
    }
    return 0;
}
```

```
#include <stdio.h>

int main() {
    int num = 7;
    if (num % 2 == 0) {
        printf("Even\n");
    } else {
        printf("Odd\n");
    }
    return 0;
}
```

```
#include <stdio.h>

int main() {
    char grade = 'B';
    switch(grade) {
        case 'A': printf("Excellent!\n"); break;
        case 'B': printf("Good job\n"); break;
        default: printf("Keep trying\n");
    }
    return 0;
}
```

## ● Example ( Program ) :

### ● Looping

```
#include <stdio.h>

int main() {
    // Prints 1 to 5
    for (int i = 1; i <= 5; i++) {
        printf("%d ", i);
    }
    return 0;
}
```

```
#include <stdio.h>

int main() {
    int count = 1;
    while (count <= 3) {
        printf("Loop %d\n", count);
        count++;
    }
    return 0;
}
```

```
#include <stdio.h>

int main() {
    int i = 10;
    do {
        printf("This runs once even if i > 5\n");
    } while (i < 5);
    return 0;
}
```
